Kevin Nyawakira

Senior Application Security Engineer | Security Researcher

+250-784-438-186 knyawakira@gmail.com linkedin.com/in/kevin-nyawakira
github.com/kevin81767 Kigali, Rwanda

Summary

Senior Application Security Engineer with expertise in vulnerability assessment, penetration testing, and DevSecOps integration. Former web developer turned security specialist with a proven track record of building custom security tools and automating security processes. Experienced in application security assessments, bug bounty hunting, security research, and training teams on offensive security principles. Currently exploring AI applications in cybersecurity and developing innovative solutions for security automation.

Education

Bachelor's Degree in Computer Science **2016 – 2018**
Adventist University of Central Africa *Kigali, Rwanda*

High School Diploma **2008 – 2015**
International School of Bujumbura *Bujumbura, Burundi*

Professional Experience

Senior Application Security Engineer **2022 – Present**
IREMBO *Kigali, Rwanda*

- Conduct comprehensive security testing, code reviews, and vulnerability assessments on web and mobile platforms
- Collaborate closely with engineering teams to integrate security practices into the development lifecycle (DevSecOps)
- Design and implement automated security processes and custom tools to streamline testing and vulnerability discovery
- Establish security standards and best practices across development teams

ICCA Consultant **Dec 2025 – Present**
ICCA AFRICA *Kigali, Rwanda*

- Lead end-to-end security assessments across client applications and environments
- Perform application security testing across a range of application types
- Embed security review into the software development lifecycle (SDLC), guiding remediation with client engineering teams
- Advise client teams on secure development standards and vulnerability management

Instructor & Application Security Engineer (Part-Time) **2021 – Present**
SHIELD TECH HUB *Kigali, Rwanda*

- Deliver comprehensive training on offensive security principles and vulnerability management
- Guide companies through vulnerability discovery, triage, and remediation processes
- Support startups in implementing DevSecOps practices and hands-on security tooling
- Develop curriculum and training materials for cybersecurity education programs

Co-Founder, CTO & Chief Hacking Officer **2019 – 2021**
INTORE SECURITY LAB *Remote*

- Led comprehensive red team assessments and penetration testing engagements for diverse client base
- Architected and developed custom exploits and security assessment tools for enhanced efficiency
- Managed technical operations and established security testing methodologies
- Built strategic partnerships and drove business development in the cybersecurity sector

Lead Developer **2016 – 2021**
IRIS HUB *Remote*

- Delivered end-to-end custom digital solutions and full-stack web applications for early-stage startups
- Led development teams and established technical architecture for scalable applications
- Collaborated with stakeholders to translate business requirements into technical solutions

Notable Projects

JS Explorer **2026**
github.com/kevin81767/jsexplorer | Python, Security Tooling

- Command-line scanner that detects hardcoded secrets, credentials, and API keys in remote JavaScript files
- 30+ detection patterns with opt-in Shannon-entropy analysis and severity ratings; runs with zero dependencies

Bambda That! **2024**
Live GPT | AI, Security Automation

- Developed an intelligent GPT that converts plain English queries into precise Bambda filters for Burp Suite history analysis
- Streamlines security testing workflows by automating complex filter creation for vulnerability researchers

K-command **2023**
github.com/kevin81767/K-command | Python, Flask, Security Tools

- Built a Flask-based web application providing unified interface for reconnaissance, fuzzing, and scanning tools
- Integrates multiple security tools into a single dashboard for efficient penetration testing workflows

subPull **2022**
github.com/kevin81767/subPull | Bash, Automation, OSINT

- Developed Bash script combining popular subdomain enumeration tools with Telegram integration
- Automates reconnaissance workflows and provides real-time notification of discovered assets

lazy-BBH **2021**
github.com/kevin81767/lazy-BBH | Bash, Environment Setup

- Created comprehensive Bash installer for complete web application security testing environment
- One-command setup of essential hacking tools and dependencies for bug bounty hunters

Technical Skills

Security Testing: Burp Suite, OWASP ZAP, Nmap, Masscan, MobSF, Metasploit, SQLMap, Nikto, Bug Bounty Hunting
Compliance & Standards: PCI DSS, OWASP (ASVS / Top 10), OAuth, SDLC Security, Secure Code Review
DevSecOps & Automation: CI/CD Pipeline Security, Vulnerability Management, Python Scripting, Bash Automation
OSINT & Intelligence: Google Dorking, Maltego, Shodan, GreyNoise, Reconnaissance Automation
Reverse Engineering: Apktool, Ghidra, Binary Analysis, Mobile Application Security
AI & Machine Learning: AI Security Automation, Agent-Driven Tooling, Custom GPT Development, RAG Implementation
Programming Languages: Python, Bash, JavaScript, PHP, Java, C, HTML/CSS, SQL
Infrastructure: Docker, AWS, Linux Administration, Network Security, Tor Networks

Awards & Recognition

Overall Winner & Best Attacker **2018**
CyberStars Rwanda Competition

2nd Place **2018**
Rwanda National Cybersecurity Competition
